Acknowledgements

Four years ago the chances of me finishing my Ph.D. research seemed grim, because I was completely stuck with the subject I started out with. It was only when Hans De Raedt took it upon himself to be my 'promotor' that things started to move in the right direction again. I am very grateful for his support and confidence and for the many discussions we had.

Furthermore, I would like to thank Manuel Reenders and Valery Gusynin for the stimulating collaboration during the first years of my Ph.D. research. I also thank Marinus Winnink for general support and guidance.

Many thanks go to Judith Rinker for editing the English text of this thesis. Judging by the amount of red ink on the first corrections, it was a lot of work.

Joanneke Prenger and Klaasjan Kok, thank you for doing me the honor of being 'paranimf'.

Thanks go to my teammates and friends at *De Groene Uilen*, especially to the members of the board. I had a great time playing basketball in Groningen.

Finally, I would like to thank my family and all my friends and colleagues who were a big support during the ups and downs of my time as a Ph.D. student.
